Continuation of 11. does NOT place the application in condition for allowance because: In regards to applicant's arguments that the reference Giobbi has a different intended use than applicant's invention, examiner wishes to point out the intended use of applicant's system is not claimed and if claimed would not be given patentable weight. Applicant argues that Giobbi does not have transmission/receiving occurring between anything other than the player and the game machine. Examiner respectfully disagrees, as stated by Giobbi in [0022] data may be retrieved from a host computer, remote from the game machine, in response to the player interacting with the game machine, which would result in the transfer of information via the wireless transceiver between the game machine, the mobile terminal, the transceiver, and an information managing apparatus. Giobbi discloses a wireless connection between the player and the game machine and the terminal and a network connection to the remote host. Using the wireless transceiver to also communicate with the remote host would have been an obvious combination of the wireless and the network connection which produces the expected result of a wireless network connection. Wireless networks to communicate in gaming systems were well known and understood at the time of applicant's invention as exhibited by previously cited Oles et al (US 6641484, 9:50-58) and as such it is not hindsight reasoning to use a wireless network to communicate between gaming devices. Applicant's arguments directed to how the functionality of the applicant's invention differs from Giobbi are not convincing as they are directed to features that are not claimed (e.g. the exclusion of players, the monitoring of any aspect of the game machine by "floor staff").
